Wrap-around back design: Strength within gentleness

The chair back frame has an overall oval outline that transitions naturally from top to bottom, with rounded lines like an embracing hand, giving a sense of security and envelopment. Visually soft and welcoming, yet structurally stable and robust, it embodies a design philosophy of comfortable support.

The chair back and armrests are molded as a single piece, forming a naturally flowing, wraparound structure, like an embrace, bringing both psychological and physiological stability. Every time you sit for a long time, you can feel the design's understanding and response to your body, like an invisible assistant silently supporting your daily work rhythm.

Premium Office Chair

Multiple color options, precisely matched to diverse office environments.

Different tones create different atmospheres, meeting the dual demands of corporate image and spatial aesthetics.

Scientific fit, protecting spinal health

The chair back is meticulously designed according to ergonomic curves, precisely conforming to the S-shaped structure of the vertebrae to provide continuous support from the neck to the lower back. This effectively relieves pressure on the spine, maintains a natural sitting posture, and allows for comfortable and burden-free sitting even for extended periods.

A refreshing and comfortable sitting experience that allows you to breathe freely.

The seat features a highly breathable mesh design, creating a breathable and comfortable seating experience. Free airflow effectively reduces stuffiness and humidity, keeping you cool and comfortable even in high-temperature or long-term work environments.

The seat fabric is made of high-quality sofa fabric with a fine texture, soft and skin-friendly feel, and excellent abrasion resistance and anti-pilling properties. Even after long periods of sitting, it does not easily accumulate heat and sweat, making the office environment more refreshing and comfortable.

Thickened gel layer for a light, floating seating experience

The inner core of the seat cushion is made of 8.5mm thickened gel high-elasticity shaping cotton, providing powerful support. The moment you sit down, it feels as if you are lightly suspended, as if your body is gently lifted. Even after sitting for a long time, you can still maintain comfort and ease.
